

Ozone Laundry

Breaking down the benefits

Check out the top three reasons why you should choose an energy-efficient system.

1. Reduce chemical cost, energy costs and water consumption.
2. Extend the lifespan of clothing and other laundered items.
3. Shorter wash cycles means more productivity and profit.

What you need to know

Ozone laundry operations

Ozone laundry is a process where an ozone generator injects ozone (O₃) into the water supply of the existing washer, significantly reducing hot water and chemical use. Ozone laundry systems work 3,000 times faster to destroy bacteria than dissolved chlorine bleach.

Upgrading makes a difference

Reduce your energy use by up to 45 percent by upgrading. On top of reducing natural gas and electricity consumption, you'll also lower your water and sewer costs. Ozone can reduce usage by up to two rinse cycles.

Speed up the process

Employees can boost productivity due to the shorter cycle times. Consumers report that clothes and linen both last longer and feel softer.

What you can do

Take advantage of rebates

Peoples Gas and North Shore Gas offer rebates based on the size of the washer measured in pounds of capacity.

This rebate only applies to facilities with on-premise laundry operations, including hotels/motels, fitness and recreational sports centers, healthcare (excluding hospitals) and assisted living facilities. Hotels with more than 250 rooms should apply to the custom rebate program.

Visit PeoplesGasDelivery.com/Savings and NorthShoreGasDelivery.com/Savings to apply for rebates.

For more information or to take advantage of available rebates, please call us at 855-849-8928.
