

## Increase Your Home's Comfort

### Air sealing, insulation and duct sealing rebates

**Get up to \$1,200 in rebates** from Peoples Gas or North Shore Gas for air sealing, insulation and duct sealing projects completed by an approved contractor.

| Type of project         | What qualifies                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Rebate                      |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>Air sealing</b>      | If your home meets requirements after testing is performed, you may qualify for 40 cents per CFM50 reduction.<br><br>Your contractor will use an industry standard protocol known as a blower door test to determine the amount of air leaking from your home before and after they perform air sealing. The amount of air leakage is measured in a unit known as CFM50 (cubic feet per minute at 50 pascals of pressure). This is equivalent to the amount of air that flows through your home after it is hit by a 20 mile-per-hour wind.                                                                             | <b>Up to \$400 per home</b> |
| <b>Attic insulation</b> | If your attic has less than five inches of insulation, you may qualify for a rebate of 30 cents per square foot for insulating your home to the ENERGY STAR® recommended levels for our area.                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>Up to \$500 per home</b> |
| <b>Wall insulation</b>  | If you have walls in your home that have little or no insulation, you may qualify for a rebate of 50 cents per square foot for insulating them to meet the current energy codes.                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Up to \$400 per home</b> |
| <b>Duct sealing</b>     | If your ducts run through areas of your home which are not meant to be heated, such as crawlspaces, attics or unfinished basements, you may qualify for a rebate of \$2 per CFM25<br><br>Sealing leaky ducts helps ensure that your heated or cooled air flows to areas of the home where it is needed.<br><br>Your contractor will use an industry standard protocol known as a duct blaster test to determine the amount of air leaking from your ducts before and after they perform duct sealing. The amount of air leakage is measured in a unit known as CFM25 (cubic feet per minute at 25 pascals of pressure). | <b>Up to \$400 per home</b> |

All work must be completed by an approved contractor who will provide your rebate as an instant discount off your final invoice.
